

“Minibrains” May Be the Future of Drug Testing
Daniel Beck

What makes cerebral organoids so useful? What is their scientific promise?

At what point should cerebral organoids possess rights? Are cerebral organoids similar to unborn fetuses? Are they like animal test subjects?

What reasons do we have for maintaining the “inviolable boundary between species”? Should we refrain from transplanting cells from one type of animal to another?

How do cerebral organoids threaten our scientific and legal definitions of death? What ramifications might a different definition of death have on our society?
